Martensitic stainless steel resistant to corrosion

- good toughness and homogeneous mechanical properties throughout the mould
- good micro-purity level and little segregation
- excellent machinability, suitable for embossing, wear resistance and weldability
- suitable for moulds subject to corrosive plastic materials (PVC, polymers) and humid/salty atmosphere
- applications: moulds for corrosive plastic materials, synthetic resins and for the automotive industry (head lamp components), moulds for food industry products, cosmetics, rubber pressing, dies and gauges for PVC extrusion
