Cold-work tool steels

- very high toughness values after quenching and tempering
- it can also be hardened in air by heat treatment to minimize deformations
- high hardenability
- suitable for making tools subject to repeated shocks and strong pressure
- the dies must not start to work if their temperature is not at least 250 - 300 °C.
- applications: cold-work matrix for cutlery and minting dies, anvils, plastic moulds, die drawplates, drill bushes, banking punches, shears, scrap shear blades and blades to shear billets or steel sheets, bending tools, drawing jaws
